

Thank for purchasing this Preset pack from Loopmasters. Please ensure you have the most up to date version of Xfer Serum, by checking Xfer site for Updates. All the MIDI and Presets have been created by top producers to give you the most flexible Loopmasters package yet. For any technical questions email Paul at [studio@loopmasters.com](mailto:studio@loopmasters.com) or our usual support at [support@loopmasters.com](mailto:support@loopmasters.com)

### **MIDI FILES**

Once you have downloaded and extracted the main folder from the .zip file, Copy the extracted folder to a safe place on your computer making sure you note where this is and what it is called the pre fix will start with "PW\_" and then be followed a number and then with the packs full name. so for instance PW\_01\_Davide\_Carbone\_DnB\_Massive

To Load the included MIDI files on most DAW's you will need to either go to the file open tab on your chosen software and use the Import Midi File option or drag and drop any of the .Mid files into your arrangement/session window onto a new track. For you to be able to here anything at this stage you now need to assign some kind of instrument to that track be it a software or hardware synth of your choice, Please check your Instructions of you relevant DAW if you are unsure how to do this.

The name of the MIDI file includes the type of instrument that would sound best, and the original Key of any melodic MIDI loops but feel free to experiment with Instrument types and Alter the programming to fit your tracks.

### **LOADING SERUM SYNTH PRESETS**

1. Unzip the downloaded pack to your computer.
- 2 Locate one of the following directories on your computer
  - Macintosh: HD:Library:Audio:Presets:Xfer:Serum:Presets
  - Windows C:\Users\Documents\Xfer\Serum Presets
5. Move entire Presets folder here.
6. Load Serum in your software and use the drop down Presets menu to locate the sounds

We hope you enjoy the sounds! Loopmasters Team
